### WP REST API (WP API)

#### Access Control Allow Origin Error (CORS) (2 posts)

Great plugin! I'm having issues with CORS though when I'm working locally and when I see it on the live site. On the live set, I get this error: "The 'Access-Control-Allow-Origin' header has a value <http://localhost> that is not equal to the supplied origin" and the same happens when I'm working locally, except the value is my site's domain name

Which file in the json-rest-api folder should I add this to so that I will not get the access control allow origin error?

```
header("Access-Control-Allow-Origin: *");
```

You can add it to any file, as long as that file is being executed. I'd recommend adding the following to an activated plugin's functions.php (maybe to the JSON REST API plugin, but be careful that it doesn't get overwritten with updates);

```
add_action( 'init', 'allow_origin' );
function allow_origin() {
    header("Access-Control-Allow-Origin: *");
}
```
